A
Matched-contrast design
MOF population
linked structure + adsorption
Exact context
topology + dimensionality
Measured geometry
seven fixed calipers
Chemistry change
linker / metal / motif
Evidence unit
contrast → dependence family
B
Primary chemistry-changing support
Linker-family
Metal substitution
Functional-motif
12,392
674
6
Primary matched pairs (log scale)
C
Support contracts as geometry limits tighten
Linker-family
Metal substitution
Functional-motif
Accepted pairs
Very Tight
Tight
Primary
Moderate
D
Dependence families define the evidence units
Linker-family
Metal substitution
Functional-motif
Raw pairs
Dependence families
Count (log scale)
